Easy Cut II Kits
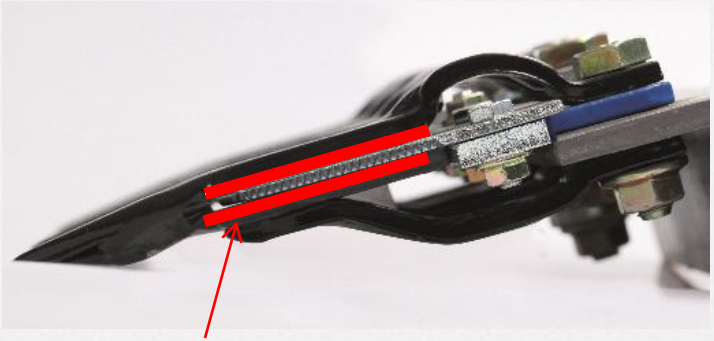
Maintenance (Guards)

- Guards should be checked for wear at the start of each season
- Prolong your guard life by changing sections when they are worn



4.0 – 5.4 mm

Max. wear gap > 5.4 mm

Easy Cut II Kits
Maintenance (Sections)

- Worn sections create additional wear on guards by pulling the crop into the cutting edge of the guard rather than shearing it off
- This generates knife load on the wobble box, demanding more power requirements
- Change your sections more often to save guards and eliminate downtime from knife breakage
